

CYBERCRIME AND LAWS

Be Aware. Be Secure. Be Legal. 

TOPIC: **PHISHING ATTACK**

Phishing is a type of cybercrime where attackers pretend to be a trustworthy entity to trick individuals into sharing sensitive information such as passwords, OTPs, bank details, or credit card information.

HOW IT WORKS

1. Attacker sends a fake email / message

2. Victim clicks on the malicious link

3. Victim enters sensitive information on a fake website

4. Attacker steals the information and misuses it

EXAMPLES

• Fake bank emails asking to update account details

• Fraudulent messages offering prizes or discounts

• Fake login pages of social media, e-commerce sites

IMPACT

• Financial loss

• Identity theft

• Breach of privacy

• Loss of trust and reputation

HOW TO PROTECT YOURSELF

- ✓ Do not click on suspicious links or attachments.
- ✓ Verify the sender's email/URL before responding.
- ✓ Never share passwords, OTPs, or bank details.
- ✓ Enable two-factor authentication.
- ✓ Keep your software and antivirus updated.

**BE SMART.
DON'T GET
PHISHED!**
